The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 3-7 and 10-18 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Oroskar et al, for the reasons of record.

The Xiao Declaration filed under 37 CFR 1.132 on February 16, 2010 has been considered, but is noy convincing of error in the rejection. The experiments in the Declaration demonstrate that elemental platinum metal catalyst was able to iniate a reaction between methanol and hydrogen peroxide in the liquid phase at ambient temperature to provide a gas, whereas manganese dioxide did not initiate the reaction but instead catalyzed a decomposition of the hydrogen peroxide to water and oxygen, leaving the methanol unreacted. However this would not be unexpected since Oroskar et al specifically disclose at col. 6, lines 49-55 that manganese oxide is the preferred catalyst for decomposition of the oxidizer (not for reforming the oxygenate to generate a

Art Unit: 1793

hydrogen rich gas). Although Oroskar et al suggest in the paragragh bridging columns 5 and 6 that manganese oxide would catalyze the reaction between methanol and hydrogen peroxide to generate a hydrogen rich gas, Orokar et al also disclose in the same paragragh that the metals cobalt, nickel, copper,, gold, palladium, ruthenium, rhodium and platinum, presumably in elemental form, would also catalyze the reaction between methanol and hydrogen peroxide to generate a hydrogen rich gas, If anything is unexpected it would be that manganese dioxide does not catalyze the reaction between methanol and hydrogen peroxide to generate a hydrogen rich gas, and not that platinum does.

This is an RCE of applicant's earlier Application No. 10/588156. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Wayne Langel whose telephone number is 571-272-1353. The examiner can normally be reached on Monday through Friday, 8 am - 3:30 pm Eastern Time.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stanley Silverman can be reached on 571-272-1358. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
